- Very lightweight and compact
- Extended built-in communications

The ProMark Series

The right GNSS solution for every budget and for every surveyor.

Small, medium or large, choose the receiver that best suits your needs and grow with ProMark.

The ProMark 100 is the best tool for L1 post-processed surveys. Should your needs change to a multi-frequency RTK solution, there's no need to buy a new unit, simply upgrade to a ProMark 200. If you need access to more constellations, that's easy too. Use your existing ProMark handheld receiver as a controller, and buy only the ProMark 500 smart antenna.

ProMark accuracy, advanced multi-path mitigation and ruggedness, adds up to better productivity and profitability for you. With ProMark 500 and the new ProMark 100 and 200 receivers, Ashtech offers land surveyors the complete range of GNSS solutions to meet each surveyor's individual needs, style and budget.

Choose ProMark for high-performance and the safety of high ROI.
